# Writeup: TakeOver tryhackme

To solve this room I first added the ip and the domain futurevera.thm to the /etc/hosts file.
The title says that this challenge revolves around subdomain enumeration so we will start there.

The info in the first task says the they do lots of space research and write blogs about it. Which made me thing that there is a subdomain for blogs. They also say they are rebuilding their support page which hints to the idea of a support page or subdomain. I added both blog.futurevera.thm and support.futurevera.thm into the hosts file and browsed to them.

There is a page at http://blog.futurevera.thm but after exploring it I found nothing of note.

Browsing to http://support.futurevera.thm we get another website that didn't seem to have anything important.

We are recreating our Support website.

We're working hard to finish the re-development of our support website.
